to investigate the case of a man who, it was alleged had committed snieide . Get him in business and after the or near that place the day previous. The gentlemen lost no time in answering the call, and upon their arrival were confronted by the following situ- Let him forget he was ever a boy. ation. They found the body of a man Make gold his god, and its jingle his lying there who had died some time Monday forenoon, and who had been Keep him a-hustling and clear out of brought to Modena by Samuel Bauer and Frank Thorley, two young men of our city; who were out in that part of the county herding sheep. The young men had explained to the authorities at Modena that on Sunday morning Bauer noticed some strange creature wallowing about in the short brush at a distance from his camp. It was too far away for him to make sure as to what it was, and as Thorley, who was camped not far away had field glasses, he went to his camp to get them to try to discover the nature of the strange apparition. By the aid of the glasses they could see that it was a man that appeared to be in distress of some sort, and to be partly walking and partly crawling. They at once made their way to him and found he was suffering from a terrible wound in the darfait. Closer inspection showed them that the windpipe was severed and that he was breathing through the wound. He was unable to walk, but otherwise seemed to be in possession of all his faculties on the Emma mine, of mind. When asked who inflicted the wound, he pointed to himself, explaining by means of signs that he had done it last night with an old case year. knife. As he had lost a great quantity of blood it was not a difficult matter to follow the course he had taken in his ramblings since the wound was inflie- are also enthussistic over the showted, and at no great distance they found an old ease knife with the point broken off and seemed to have been recently sharpened on some rough substance. The young men secured tunnel is now 60 feet into the mountain a team as soon as possible and took the suffer to Modena, distant about six or seven miles from the place where they found him. When the party reached Modena Mr. Thomas A. Flood of per ton, and 11.5 per cent copper. Fay was immediately called by "Phone" and deputy sheriff Overholt of Stateline was sent for. In the meantime, in answer to the question "What is your name," the wounded man wrote on a mediately on his arrival Dr. Flood adleaving him in a semi conscious condition, but apparently restfull. No statement was made by theunfortunate man of the cause of his assault abon his life. and the reason can only be surmised. the Dr. said to the officers it was prothe evidence was so clear that it was a bet, but to oblige the editor, Greenpounds, and stood about five feet seven

## DR. B. CLUFF, JR., GOING TO MEXICO.

Tendered His Resignation as President of B. Y. University.

DR. BRIMHALL TO SUCCEED HIM.

Retiring Pre-tient Will Superintend the interests of the Utah-flexcan Rubber Company.

[Provo Enquirer.]

President B. Cluff, Jr., has tendered his resignation and the board of trustees will meet tonight and take action upon it. President Cluff has received an offer of the superintendency of the Utah-Mexican Rubber Company, and has concluded to accept it as soon as seldom those who started in business his resignation of the presidency of the cepted by the board.

President Cluff has for a- long time past had a desire to resume his explorations and investigations of the country in which the Utah-Mexican Rubber company is operating with the view of gaining additional corroborative evidences of the truth of the Book of Mormon history. He believes in accepting the position offered he can better pursue researches in that direction than he ean do in his present position, Of course it is a praisworthy purpose he has in view, and one which, if he should be successful in carrying out. may prove of incalculable benefit to the community of Latter-day Saints.

President Cluff has been identified with the educational institution he is about to separate himself from si early beyhood, and for the last twelve years at a been its president. Un has his direction the institution has my its greatest progress and developme and there are serious misgivings entertained by many of the friends of the advisabilty of releasing him from the charge he has so ably and successfully conducted. It is quite probable however, that the desired release will

There is a likelyhood that Dr. Geo. H. Brimhall will be the successor of President Cluff. Like the retiring president, Dr. Brinhall has almost grown up with the Brigham Young University. There is no man more loved by the faculty and students than is Dr. Brimball, and no man identified with its growth is perhaps as well qualified to take the charge of that great school of learning. That his appointment will meet with general approval and satisfaction is a foregone conclu-

It is stated that Dr. Brimball, who has been residing in Canada for several months past for the benefit of his health, is so far recovered as to be able to assume the duties of president of the B. Y. University.

those very banks of the Monongahela where Braddock laboriously cut his way through the woods, is to be found the most wonderful aggregation of coking ovens, blast farnaces, and rollngs mills in the world. Although just now we are concerned merely with the distory of the development of these industries, we may be pardoned a reference to the fact that in St. Louis, five hundred miles to the westward of the Braddock battlefield, the great republie which has sprung from that strip of colonies that fringed the Atlantic seaboard in 1755, is just now preparing to celebrate the one hundreth anniversary of its acquisition from France of the vast territories from which that country sought to bar the early colonials out .- From the Iron and Steel Number of the Scientific American.
